Welcome!

Thank you for choosing Wells Fargo for your card payment processing

This guide brings together the information you need to get started processing transactions. Please read through it to optimize the payment processing features and benefits available to you. Keep this guide in a convenient location for future reference.

At Wells Fargo, we strive to build long-term relationships with our merchants by providing great service, valuable products, and reliable support. Don't hesitate to let us know how we can support you and your financial success.

We're happy to do business with you.

Important resources

Most questions about your card processing activity can be answered by contacting our Customer Service contact center or your Merchant Services specialist (if assigned). Other specific areas of service and contacts can be found below.

When calling us, please have the following items handy: Your merchant account number (also known as MID), business name, address, taxpayer ID number, and the checking account you use with your merchant account.

Area or topic	Specific need	Contact information
Customer Service	General service inquiries, billing questions, account changes, and security questions	1-800-451-5817
Authorization assistance	Visa® / Mastercard® / Discover® / American Express® Voice Response Unit (VRU) for Referrals and Code 10 Operator	1-800-626-4480

In-person payment processing

Credit card processing

When your customer pays for products or services with a credit card, you can accept payments with:

- a chip card (if the chip is damaged the magnetic stripe can be used).
- a contactless card.
- digital wallet payments, including Apple Pay[®] and Google Pay[™].

The card information is verified and the card issuer provides an authorization to Merchant Services to indicate the availability of funds at the time of the purchase. If the card is damaged or the transaction does not take place in person, you can manually key in the card number; this may result in additional fees.

After you obtain an authorization and settle the transaction, the funds are transferred to your deposit account. If you're settling your Merchant Services funds into your Wells Fargo business deposit account, you'll receive your funds as soon as the next business day.

Debit card processing

Debit cards access funds from the cardholder's bank account. There are two types of debit: PIN-based debit and non-PIN debit.

- PIN-based debit transactions require cardholders to swipe or insert their cards at the point of sale and enter their PIN to authenticate the cardholder and authorize payment for goods or services. Cardholders do not sign a receipt.
- Non-PIN debit transactions require cardholders to swipe, insert, or tap their card at the point of sale or have the card number manually entered. When a card number is manually entered, this may result in additional fees.

Apple Pay is a trademark of Apple Inc., registered in the U.S. and other countries. Google Pay is a trademark of of Google LLC.

Online payment processing (e-commerce)

Payment gateway

A payment gateway is a link between your website (or the website hosting your goods or services) and your payment processor (Wells Fargo). When your customer makes an online purchase, the information from your website must be sent through a payment gateway to obtain an authorization and complete the transaction. Payment gateways work with a variety of online payment service providers such as shopping carts and mobile wallets.

Getting started

There are a few steps to get started with your online merchant account.

- **Step 1** You will receive two separate emails with your sign-on and setup instructions within one to two business days. The emails will originate from one of the following depending on the payment gateway you chose.
 - Authorize.net Gateway users will receive an email from **support@authorize.net** containing an activation link that enables merchants to create a username and password.
 - Wells Fargo Payment Gateway users will receive an email from CyberSource Customer Support (donotreply@support.cybersource.com) containing an activation link that enables merchants to create a username and password.
 - Clover users will receive an email from Clover Support (app@clover.com) containing an activation link that enables merchants to create a username and password.
 - If you already have a payment gateway, Wells Fargo will send an email from wells.fargo.products@ wellsfargomerchantservicesllc.com containing a merchant username and password, or merchant identification and terminal identification.
- **Step 2** Review the information in this document to confirm that your website is ready to begin processing card payments.
- **Step 3** Follow the instructions from your payment gateway for converting from test mode to live transaction processing.
- Step 4 Start processing card transactions.

Authorization and authentication

Authorization

An authorization is an approval on a cardholder account for a sale amount. All card sales require an authorization from the card issuer to verify that the card is valid and has sufficient funds or credit line to cover the amount of the transaction. The card issuer provides an authorization and approval code to Wells Fargo.

Authorization is not a guarantee that you will receive payment for the authorized or approved transaction, and it does not mean that the person using the card is the rightful cardholder. In addition, because transactions may be disputed at a later date, it is important to retain all authorization codes as proof of approval. To obtain voice authorization for any non-Clover product, call our Authorization Center at 1-800-626-4480. Voice authorizations are not available for Clover products.

Visa, Mastercard, Discover, and American Express don't require merchants who are able to accept chip card payments to obtain signatures for card-present credit or debit transactions. However, merchants can still use a customer signature as a cardholder verification method as required by individual state or local laws. Merchants who are not enabled to accept chip card payments are responsible for the costs associated with card-present fraud.

Code / message	Response definition
00 – Approved	A two to six digit approval code is provided.
02 – Declined	Do not accept the card once declined and request another form of payment.
03 – Pick Up Card	Decline; do not try again. Please hold onto the customer's card (if it's safe to do so). The card issuer requests that the card be removed from circulation. The merchant should never accept a card for payment when this response is received.
04 – Referral or Call Center	The card issuer requests direct contact with the merchant in order to authorize the sale. The merchant must contact the Wells Fargo Voice Authorization Center at 1-800-626-4480.
08 – Invalid Debit Card	The cardholder account number was entered incorrectly.
10 - Invalid Account Number	The cardholder account number was entered incorrectly.
14 – Invalid Expiration	The cardholder expiration date was entered incorrectly.
15 - Invalid Transaction	Verify that the cardholder information was entered correctly.
44 – Unable to Connect	The card issuing bank requests direct contact with the merchant in order to authorize the sale. The merchant must contact the Authorization Center for Visa, Mastercard, American Express, and Discover.
Hold Card / Pick-up Card	Decline; do not try again. Please hold onto the customer's card (if it's safe to do so). The card issuer requests that the card be removed from circulation. The merchant should never accept a card for payment when this response is received.
Waiting for Line	The phone lines are currently busy; try again.
Invalid Merchant Number	The network does not recognize the merchant account number. Verify the merchant number was entered correctly and make sure the account is still in an active or open status.
Hold Card	Decline; do not try again. Please hold onto the customer's card (if it's safe to do so). The card issuer requests that the card be removed from circulation. The merchant should never accept a card for payment when this response is received.

Authorization codes and messages

Authentication

Authentication and verification methods are essential in maintaining the efficiency and integrity of your online business. Following are the key data elements used during authorization that are designed to minimize fraud:

- Address Verification Service (AVS) reduces exposure to fraud by confirming that the address attached to the payment card matches the billing address the customer enters on the website.
- Credit card security codes Card Identification Code (CID), Card Verification Value (CVV2), and Card Verification Code (CVC) are important internet security features that help validate that the customer placing the online order is the actual cardholder.

To help maximize authorizations, take advantage of fraud protection services offered by Wells Fargo such as AVS and credit card security codes. Also consider using the additional fraud protection services provided by your payment gateway.

Merchant statement

Wells Fargo provides a monthly statement of your transaction activity in a format designed to facilitate account reconciliation.

In addition to the monthly merchant statement, Wells Fargo Payment Gateway customers also receive a Treasury Management Account Analysis Statement.

The **Statement Period** indicates the date range included on the statement. Processing that took place within this date range is reported on this statement.

The **Summary** summarizes card activity and related charges for the statement period. Use the page numbers to help you quickly find details.

When this area appears on your statement, be sure to read it for important information regarding your account.

Key card processing terms in plain language

Total Amount Submitted – The total dollar amount of card transactions submitted and processed during the Statement Period.

Chargebacks/Reversals – Those transactions that are challenged or disputed by a cardholder or card issuer. A Chargeback equals the transaction amount that is disputed by the cardholder or card issuer. A Reversal is the amount that was initially charged back to the merchant, but has subsequently been resolved in favor of the merchant.

Adjustments – The amounts added to or deducted from your account to resolve processing and billing discrepancies.

Fees – Transaction-based and/or fixed amounts charged for specific card processing services.

Merchant Number – The unique account number assigned to every merchant and merchant location. You'll find it at the top of your statement.

Reporting

All Wells Fargo merchants can get reporting for their merchant account through the Business Track® account management solution. Depending on the payment processing solution you selected, there may be additional sources for reporting. For example, Clover merchants also have access to high level reporting for their account through their Clover dashboard at <u>www.clover.com/dashboard</u>.

Business Track account management solution

Business Track is an online account management and reporting portal for your merchant account. Business Track is available to you when you open a merchant account with Wells Fargo. We automatically send you an email providing a user ID for enrollment. If you are not enrolled at the time of setup, you can do so easily by visiting <u>www.businesstrack.com</u> and answering a few questions to initiate your enrollment.

The Business Track portal gives you access to powerful reporting and analysis tools including:

- **ClientLine**[®] View payment processing information such as sales, bank deposits, and statements, and create and schedule custom reports viewable online or via email.
- **Dispute Manager** Receive, view, and respond to disputes and retrieval requests online.
- Payments Tax Reporting Access your tax information.

There's no charge for using ClientLine or Payments Tax Reporting. Dispute Manager is also available at no extra charge for most businesses. If you have any questions about these services, please call your Merchant Services Relationship Manager or customer service representative.

ClientLine

Benefits

- Gain anytime access manage your accounts at a time that is convenient for you.
- Help minimize cost view, print, and download your merchant processing statements at no extra cost².
- Perform historical / trend analysis gain more robust account information.
- Streamline reconciliation download information for analysis.

Dispute Management

Dispute Manager is a service designed to help you manage retrieval requests and disputes more effectively. It is part of a comprehensive solution that enables research and the online exchange of information between you and Wells Fargo for dispute management. You can access Dispute Manager from the **Applications** tab on the Business Track home page.

Benefits

- Streamline the dispute and retrieval management process.
- Manage cases online for faster dispute resolution.
- Control workflow in the back office in real-time, and help increase your audit functionality.
- Respond quickly to retrieval requests and help decrease the possibility of a dispute resulting from a non-response.
- Save on mail and fax expenses and help gain efficiencies through better time management and financial controls

Payments Tax Reporting

Payments Tax Reporting provides merchants with access to their payment card processing tax reporting information through the Business Track homepage. The solution provides merchants the ability to view and manage their tax information through a centralized tool.

Benefits

- View tax validation reports.
- Access gross reportable sales reports.
- Retrieve copies of your 1099-K forms.

Email alerts

Subscribe to email alerts to receive important notifications about your account. Email alerts can let you know when your statement is available, when you have any dispute activity, and also provide you with a daily account summary.

2. Enrolling in Business Track online reporting will not automatically stop delivery of your monthly statement by mail.

Interchange

What is interchange?

Interchange is the fee charged for the transmission of data between merchant card payment processors and a card-issuing bank (the financial institution that issues a credit or debit card) in accordance with card payment network (Visa, Mastercard, Discover, American Express) rules. Different factors, including the way the transaction was processed, the card type used, and industry type can determine the level of interchange.

What is an interchange fee?

An interchange fee is included in your processing cost. It is paid to card-issuing banks for every card payment transaction to compensate for costs and risk associated in advancing the payment. Credit card processors (e.g., Wells Fargo) then determine how to pass along the fee to merchants.

What is a downgrade?

Card payment networks will quote the lowest rate for a transaction assuming that a number of requirements are met. A downgrade, or non-qualified transaction, is a card sales transaction that does not meet all requirements for the lowest rate and will process at interchange levels that carry higher costs. Rates can vary according to the card type, merchant industry type, and the way a transaction was processed. If one or more of the card payment networks' requirements are not met, the transaction will be categorized at a higher interchange rate.

What can I do to help qualify for the best rates?

The interchange rates you pay can be affected by your payment processing account configuration and the steps you take to complete each transaction. It is important to understand the factors affecting interchange rates to help you manage them and minimize downgrades. **Please note:** If you selected volume tier pricing, you will not see interchange fees listed separately on your bill. However, as stated in the *Wells Fargo Merchant Services Operating Rules*, you may be charged for penalties or other fines.

Below are things you can do to help qualify for better interchange rates:

• Make sure your customer taps, dips, or swipes their card with the terminal

Using a keypad to enter card information rather than inserting a chip card into the terminal is a common reason for a downgrade. Hand-keyed information has a higher risk of error and fraud because only the card number and expiration date are needed for a transaction. When a card is tapped, swiped, or dipped with the terminal it provides for a more secure transaction.

• Use correct Merchant Category Code (MCC)

Make sure your business is categorized correctly or you may not be receiving the interchange rate for which you qualify.

• Use Address Verification Service (AVS)

Merchants need to submit the billing address and zip code for card-not-present transactions to qualify for the lower interchange rate. AVS uses the billing information associated with a card to verify the cardholder's address.

• Establish procedures to limit the number of voice authorizations

Voice authorizations do not capture electronic authorization codes required to qualify for the lowest transaction rates. Therefore, these transactions are subject to interchange downgrades. Only use voice authorizations when prompted by your point-of-sale device.

Send settlements on time

A merchant must settle transactions in order to receive their funds. Settling means submitting the approved card transactions to Wells Fargo. We then forward your settlement request to the payment networks who confirm the transaction with the card issuer.

Be aware that transactions have to be settled within a specific amount of time after authorization to avoid higher interchange rates. Wells Fargo recommends daily settlement of all transactions. Periodically check that the phone/data lines on your equipment are working correctly to avoid late settlement. The equipment can also be programmed to automatically settle transactions at times you specify.

• Use level II and III data

When processing business, commercial and corporate cards, include level II (tax information) and III (line item detail) data to maximize your savings.

Dispute process

What is a dispute?

A dispute is a transaction that has been challenged by the cardholder or the card issuer. The card issuer has withdrawn funds from Wells Fargo for the transaction, and Wells Fargo withdraws funds from the merchant account as stipulated in the Merchant Agreement and card payment network rules. Common reasons for disputes:

- The card was fraudulent.
- Cardholder disputes the quality or receipt of merchandise.
- Merchant did not insert a chip card and the cardholder reported the transaction as fraudulent to the card issuer.
- The amount charged to the card was incorrect.
- Processing errors were made during the transaction.
- Proper authorization was not obtained.

How does the dispute process work?

After the cardholder has disputed a transaction, the card issuer can request that the transaction be charged back to the merchant; this is called a dispute request.

Wells Fargo will fax or mail you copies of these requests so that you can provide a response. If you use Dispute Manager, the internet-based dispute management tool available through Business Track, you can also obtain copies online. (See last portion of this **Dispute process** section, as well as the **Reporting section**, for more information about Dispute Manager.)

Card issuers have the right to issue dispute requests:

- up to 120 days after the purchase date, or
- up to 120 days after the final delivery date of the product or service. This 120 day time period may start later than the purchase date, however, the card issuer cannot issue a dispute request more than 18 months after the purchase date.

If the card issuer has submitted a dispute request, then funds from your account are immediately withdrawn for the amount of the dispute and will not be reversed until Wells Fargo has submitted your defense to the cardholder and/or card issuer for them to review. However, if the dispute request is fraud related, the amount of the dispute will not be reversed unless the dispute has been resolved in your favor.

What do I do?

When Wells Fargo faxes or mails you a dispute request, there will be a due date on the request form indicating when you must return, via fax, a clear and legible response. It is important to gather as much information about the transaction as you can and provide a comprehensive response to the request to help resolve the issue quickly. The dispute amount and a dispute fee are applied so it is in your best interest to resolve the customer dispute before the card issuer issues the claim.

If you have already issued a credit to your customer, provide copies of the credit record, including the date and amount that the account was credited. Please respond to dispute notices, even if you have issued a credit.

When should I respond?

Immediately. It is best to research and respond as soon as possible, as you no longer have the goods and your account has been debited for the sales amount or the disputed portion of the sales amount. Please be sure to respond quickly with a comprehensive defense in order to attempt to get the debit reversed. If you do not respond to a dispute notice or if you respond after the chargeback notice period has ended, you will not be able to reverse the dispute.

How do I challenge a dispute?

To challenge a dispute, provide a clear copy of the sales order by the due date on the request form showing:

- Date of original sale/credit
- Cardholder's account number and name
- Description of goods or services
- Total amount of the sale
- Total amount of dispute
- · Date of authorization and approval code

You may also need to provide:

- Dated cover letter detailing the reasons for requesting a review of the dispute, including information about the steps taken to prevent the dispute, and documentation to support your dispute. It is very important to clearly explain why the customer's complaint is not valid.
- Any other supporting documentation such as AVS code, delivery confirmation, bill to and ship to address, any correspondence with the cardholder, and credit card security code (CID, CVV2, CVC) response.

If your dispute and documentation support a reversal of the dispute to the card issuer and is received within the reversal timeframes, we will reverse the item back to the card issuer and we will deposit funds into your account. It is important to note that the reversal is contingent upon the acceptance by the card issuer and the cardholder. The item may be presented a second time and funds from your account will be withdrawn accordingly. A reversal is not a guarantee that the dispute has been resolved in your favor.

What tools are available to manage disputes?

Dispute Management

The Dispute Manager online tool is accessible through the Business Track portal. With the Dispute Manager service, disputes are posted to your account enabling you to investigate and resolve disputes efficiently. (Also see **Reporting** section.)

Managing fraud and losses for in-person payments

How can I help prevent fraud and disputes?

- When setting up your account, be sure to establish a password for use when processing a credit transaction to help prevent fraudulent activity.
- Make sure all chip cards are inserted into your terminal and they are read by your terminal.
- Make sure contactless payments are successfully read by your terminal.
- If both the chip and magstripe on the card fail, do not proceed with the transaction.
- If the credit card is declined when swiped through or inserted into your terminal, do not continue to try and get an authorization. Instead you should request a new form of payment from the cardholder.
- Verify that the number on the screen matches the number on the card.
- If the chip on the card has been tampered with, do not accept the card.
- Obtain an authorization number for the full amount of the sale do not break the sale into several smaller amounts.
- When handling a refund, always issue a credit to the card account used for the original sale. Clearly disclose your return policy.
- Settle transactions promptly. In cases where settlement is delayed more than five days, we recommend obtaining a new authorization.
- Set appropriate employee permissions to facilitate refunds and returns.

What if I think a transaction is suspicious?

Call the Authorization Center at 1-800-626-4480 and ask for the Code 10 Operator, which indicates that you suspect a fraudulent transaction.

When should I not accept a card payment?

Do not accept a card payment if:

- Hologram does not appear on the card or seems altered. Look for the hologram on Visa (flying doves), Mastercard (interlocking globes), Discover (celestial sphere of interlocking rings), and JCB (logo cards) cards. For American Express, some cards contain a holographic image on the front or back of the plastic to determine authenticity. Not all American Express cards have a holographic image.
- Card shows signs of tampering (for example, signature panel shows evidence of erasure; the account number or name on the front of the card looks uneven or misaligned).
- Card is unsigned. Ask for identification and have the customer sign the card in your presence. If the customer refuses, do not accept the card.
- Transaction is occurring either prior to the valid date or after the expiration date on the card. Ask for another form of payment.
- Account number on the card and the number displayed on the terminal do not match, even if an authorization is received.
- For card-not-present transactions: multiple transactions are on one card or similar cards with a single billing address, but multiple shipping addresses.

Managing fraud and losses for online payments

Payments made online are classified as "card-not-present" transactions because the card is not physically processed by a card swipe terminal. Cardholder disputes can result in the transaction amount being debited back to your account.

To help mitigate fraud and manage disputes, make every effort to know your customer. The amount of exposure you have to internet fraud depends on your business policies, operational practices, fraud prevention and detection tools, other risk controls and the type of merchandise you sell. All employees should have a thorough understanding of the fraud risk associated with any internet transaction. It is your responsibility to check and validate orders before shipping in order to minimize fraud and digital shoplifting. Address verification and credit card security codes digitally verify that the information the customer inputs on the order screen matches their card issuer's records.

Payment network compliance

The payment networks exist for the purpose of facilitating payment transactions. To most effectively manage fraud and risk in today's business environment, the payment networks have implemented comprehensive security requirements defining how cardholder data must be stored, managed, and processed to help keep it secure.

Merchants conducting business over the internet are required to transmit an e-commerce indicator (ECI) flag on purchases completed on the internet. All internet payment gateways available through Wells Fargo have been certified to pass this flag.

What are some signs that an online transaction could be fraudulent?

- Larger than normal orders.
- Orders that include several of the same items, particularly if the item has a high resale value.
- Rush or overnight orders.
- Ship-to address is an international address (certain regions and countries have been shown to have particularly high fraud rates).
- Multiple purchases on the same day.
- Orders shipped to a single address but made on multiple cards.
- Multiple transactions on one card or similar cards with a single billing address but multiple shipping addresses.
- Billing address provided by customer to the merchant does not match with AVS.

How can I help reduce fraud and disputes?

Here are some tips to consider when setting up your website or order processing system that may help reduce your fraud and dispute exposure.

On your website

- Provide your customer service telephone number on your website and in all email correspondence with the cardholder. This enables customers to contact you directly prior to calling the card issuer to initiate a dispute.
- Publish your return policy on your website and include it in the email confirmation of the order. Require that the cardholder accept your terms and conditions online.
- Confirm that the business name you provided to appear on the cardholder's statement accurately reflects the name you use to do business. This will help your customer recognize the name of the website where they placed an order when they're reviewing their card transactions. Be consistent in including this name on all correspondence and packaging.

Order processing

- Ask the customer for both a card type and an account number and make sure they match. For example, all Discover account numbers begin with a 6, Mastercard account numbers begin with a 2 or a 5, American Express account numbers begin with a 3, and Visa account numbers begin with a 4.
- Make it your policy to request the name of the card issuer and the customer service phone number from the back of the credit card for any sale over a pre-set amount. If the customer doesn't know the issuer's name, the card number could be stolen.
- Always ask for the cardholder's contact information including billing address, day and evening telephone numbers, and email address. Orders with a ship-to address that is different from the billing address are riskier. Program your system to compare the ship-to and bill-to addresses to each other and to any prior information you have about the cardholder.

- Develop and maintain a file of previous fraudulent names, addresses, zip codes, and fraudulent companies. Compile a zip code listing to draw attention to areas in which you've experienced high fraud. Confirm a firewall is installed to protect stored information.
- Request the credit card security code, also known as CID, CVV2, and CVC. This is the value printed on the card to help validate that:
 - the cardholder has possession of the card.
 - the card account is legitimate.

Note: CID value can also be validated on non-U.S. cards.

- Use AVS to verify cardholder information. At a minimum, the zip code should match before the transaction is approved. Visa and Discover require AVS in order to qualify for the best interchange rates.
- Depending on the AVS response, you will need to decide if you want to process the transaction or take additional steps to verify the customer information. Card issuers will not decline transactions based on the AVS information. It is important that you retain the AVS response and a record of your follow up actions, if any, for possible future use during the dispute process. The AVS messages are:
 - Y Exact match on street address and 5- or 9-digit zip code
 - A Address matches, zip code does not
 - Z Zip code matches, address does not
 - N–No match
 - U Address information is unavailable or card issuer does not support AVS
 - R Card issuer authorization system is unavailable; retry later
 - E Error in address data; unable to complete check
 - G Non-U.S. card issuer not participating in AVS; Visa only
 - S Address information is unavailable or card issuer does not support AVS; Mastercard only

- In the U.S., Visa, Mastercard, and Discover card issuers should provide an AVS response. If you receive a "U" response on a Visa transaction only, fraud dispute liability rests with the card issuer, not with the merchant. If you receive an unauthorized purchaser dispute on a Visa transaction where you received a "U" response, you can successfully defend disputes due to fraud by providing the AVS message with your dispute requests.
- Message "G" may be passed to you in a variety of ways depending on your choice of gateway. Examples are "Address not verified – international" or "unrecognized." Please check your payment gateway manual for further information.
- Process real-time authorizations in order to provide immediate response to cardholder.
- Only process sales transactions when the goods or services have been sent to the customer. Merchants of custom merchandise, like furniture, can charge a deposit at the time of ordering and then charge the balance when shipping.
- Send a confirmation by email to the customer so they may immediately verify the transaction.
- Send a delivery confirmation email to the cardholder once the goods have been shipped with the reminder that their card will now be charged, providing your business name and the dollar amount of the transaction.
- Use an online phone directory to verify a customer's phone number and address as belonging to that customer.
- For best practices, use Visa Secure and Mastercard SecureCode® programs because they significantly reduce the number of disputes.

After the transaction has been processed

Respond immediately to a customer's request for information about a transaction. It's to your advantage to satisfy customer concerns and resolve disputes so that disputed transactions may be reduced.

Monitor your authorization declines to identify trends and add that information to your negative file.

Obtain a new authorization if the original expires before shipment, that is if more than seven days have elapsed between the authorization date and the shipment. For example, if an item is on back order, get another authorization prior to shipping in order to verify that the cardholder is still approved for the transaction.

Confirm the security of any cardholder data that you maintain internally to prevent that information from being misused.

What if I think a transaction is suspicious?

- Call the Authorization Center at 1-800-626-4480 and ask for the Code 10 Operator, which indicates that you suspect a fraudulent transaction.
- Call or email the customer to request additional information. Use a phone directory to validate the day and evening phone numbers provided by the customer.
- Send a note to the customer's billing address to confirm the order, rather than the ship-to address.

Data security and industry compliance

The card payment networks exist for the purpose of facilitating payment transactions. To most effectively manage fraud and risk in today's business environment, the card payment networks have implemented comprehensive security requirements defining how cardholder data must be stored, managed, and processed to help keep it secure. All merchants must be compliant with the PCI Data Security Standard even if they are not required to validate that compliance.

Payment Card Industry (PCI) Data Security Standard

The Payment Card Industry (PCI) Data Security Standard applies to all credit card and debit card transactions for Visa, Mastercard, Discover, American Express, and JCB transactions. These security standards are internationally recognized best practices for cardholder data security and are intended to confirm that cardholder data is appropriately protected at all points in the course of a transaction.

Wells Fargo requires all of its merchants and their service providers to comply with the PCI Data Security Standard, as well as the Visa, Mastercard, Discover, and American Express information security programs. The PCI Data Security Standard protects cardholders while minimizing the risk to your business.

Although Visa, Mastercard, Discover, and American Express programs are based on the PCI Data Security Standard, each card payment network maintains its own compliance program and reserves the right to take independent action for non-compliance with these standards.

Visa® Cardholder Information Security Program (CISP)

Visa's CISP program defines which entities are required to validate their compliance with the PCI Data Security Standard and the method of that validation. The program then assigns penalties for entities that either fail to meet their validation requirements or are otherwise identified as not compliant with the PCI Data Security Standard.

Mastercard[®] Site Data Protection (SDP)

Mastercard's SDP program defines which entities are required to validate their compliance with the PCI Data Security Standard and the method of that validation. The program then assigns penalties for entities that either fail to meet their validation requirements or are otherwise identified as not compliant with the PCI Data Security Standard.

Discover® Information Security and Compliance (DISC)

Discover's DISC program is designed to support the mandatory requirements set forth by the PCI Data Security Standard by safeguarding cardholder information and limiting data compromises. Quality management security services provided through DISC help merchants prevent information system security events and attacks leading to identity theft and payment card fraud.

American Express Data Security Operating Policy (DSOP)

As a leader in consumer protection, American Express has a long-standing commitment to protect Cardmember Information and the DSOP for U.S. merchants ensures that it is kept secure. The DSOP is designed to address the threat of cardmember information compromise by implementing the PCI Data Security Standard. These enhanced safeguards and protections help improve customer trust, increase profitability and enhance a company's reputation.

Payment Application Data Security Standard (PA-DSS), validated payment applications

The Payment Card Industry Security Standards Council (PCI SSC) mandates that all businesses which use a payment application to process card payments confirm that they have been validated to comply with the PA-DSS. Merchants compliant may no longer be able to process card payments. To verify that your payment application is compliant, please visit www.pcisecuritystandards.org/security_standards/vpa.

Card payment network news and updates, as well as compliance and regulation information, are available online at

wellsfargo.com/biz/merchant/manage/network.

Merchant Services Operating Rules

The Merchant Services Operating Rules contain information and regulations from the payment networks to assist you with the management of your payment processing account within the guidelines of your Merchant Agreement. The Operating Rules describe the process for submitting bank card transactions for payment, obtaining authorizations, and responding to disputes. The Operating Rules are available online at

www.wellsfargo.com/operatingrules.

Risk monitoring

Wells Fargo periodically evaluates merchant accounts to confirm they are in compliance with their *Merchant Agreement*. During these reviews, you may be contacted for updated financial information, or to provide additional information that supports processing changes such as increased sales volume and/or higher average dollar values per transaction.

These risk reviews may result in a change to your reserves or funding limits, or a delay in funding, as explained in your *Merchant Agreement*. We will notify you within three business days of these reviews.

If you anticipate changes in your processing activity, please call Customer Service at 1-800-451-5817 to proactively discuss changes to your original *Merchant Agreement*.

When should you contact Customer Service to update your *Merchant Agreement*?

Call Customer Service at 1-800-451-5817 when you have changes:

- to your estimated card processing volumes
- to your estimated average dollar value per transaction
- in products or services sold
- in the number of days between delivery of goods or services and when you charge a customer's account
- to your merchant account profile such as address, name customers know you by, legal name, entity type or legal structure, and primary contact information
- to your bank account information or tax ID number
- to ownership or incorporation status

Merchant products and services

Wells Fargo offers a variety of payment processing products and services designed to increase sales and customer satisfaction. Our features include seamless integration to multiple payment processing systems, full automation of reporting and operational tools, and comprehensive equipment and software.

Call our Centralized Product Support team at 1-866-763-5540 for additional information on the products, and services described in this section.

PIN debit acceptance

PIN debit transactions require cardholders to swipe, insert, or tap their cards at the point of sale and enter their PIN to authenticate the cardholder and authorize payment for goods or services. Cardholders do not sign a receipt. With PIN debit payment, electronic deposits are made to the merchant account automatically, simplifying daily deposit reconciliation. PIN debit is a preferred method of payment for many merchants because it's quick to process and minimizes the potential for fraud.

Chip card acceptance

If you have not upgraded to chip card compatible equipment, you may be putting your business at risk and missing opportunities to better serve your customers. Chip card technology helps offer more secure transactions and reduces counterfeit card fraud. It also prepares your point-of-sale equipment to accept digital wallets and contactless payments, giving customers more purchasing options with chip cards, smartphones, and other devices.

Mobile device payment acceptance

We can help you accept the latest in payment technology. Contactless payment solutions communicate with a card, smartphone or watch, via a wireless signal. You can accept contactless payments using your chip card compatible terminal or customer-facing PIN pad. At the point of sale, cardholders can hold their mobile device near the terminal, making purchases quicker and more convenient for consumers and merchants. This solution is ideal for merchant environments that have a high volume of sales and depend on the merchant's ability to process transactions quickly.

Mobile products

We offer mobile products to help you accept payments on site, online, or on the go. You can accept credit, signature debit, and PIN debit cards. They'll also help you obtain authorizations in seconds and potentially improve your cash flow. We also have mobile products that work with your existing smartphone or tablet.³ These lightweight, compact designs help you grow your business by enabling card payments almost anywhere you have customers.

Clover Check Acceptance (also known as TeleCheck)

Clover Check Acceptance turns paper checks into electronic items at the point of sale. Your customers will have a fast and convenient way to pay and you may benefit from a reduction in bank fees, check returns, and check handling expenses.

3. Mobile access with data plan is required. Available for iPhones[®], iPads[®], and selected Android[™] smartphones and tablets.

Deposit products offered by Wells Fargo Bank, N.A. Member FDIC.
